

### Multiple applications

# OPTIMIZER, ENABLER, INTEGRATOR. STORAGE CREATES OPPORTUNITIES.

Energy storage creates multiple opportunities for more efficient power production, better grid management, and increased stability and availability. Our scalable, all-in-one EnergyPack is a perfect fit for the changing energy environment, enabling existing power systems to adapt to current trends, and creating a host of possibilities when combined with renewable energy sources – aimed at creating sustainable energy systems that are in tune with the times and ready for the future.

#### Grid & utility service providers

The MTU EnergyPack can take care of frequency regulation, manage grid congestion and allow the avoidance of significant investment in grid infrastructure, for example to enable a scale-up of electric vehicle charging. It will also make solar and wind power more reliable and dispatchable, while enabling gas or diesel power plants to operate more efficiently when combined with the MTU EnergyPack.

#### Commercia

Facilities with onsite generation such as solar arrays or combined heat and power (CHP) plants can increase their self-consumption by adding an MTU EnergyPack and take advantage of time-of-day electricity tariffs by shifting their demand. If needed, backup power capability can also be provided.

#### Industry

Remote industrial operations currently running on diesel power with no grid connections can reduce their fuel consumption and meet legal or company environmental standards more easily by integrating renewable sources with an MTU EnergyPack. When connected to the public grid, the MTU EnergyPack helps reduce demand charges and increase self-consumption of existing onsite generation to mitigate rising energy costs.

#### Community

The MTU EnergyPack increases the self-sufficiency of urban areas with local power generation, and provides reliable backup power in the event of grid failure. In areas unconnected to the public grid, adding an MTU EnergyPack to a local microgrid ensures high quality power supplies and allows the integration of renewable energies to reduce carbon footprint and save fuel.

#### Public sector

Where a grid connection is not reliable, the MTU EnergyPack increases security and quality of supply for public facilities. Stability of existing power plants can be improved by spinning reserve from the MTU EnergyPack, and solar arrays can be built in to reduce fuel consumption. If grid-connected, self-consumption of solar power can be increased to lower the amount of power drawn from the grid.

### Multiple benefits

# STORAGE SOLUTIONS FOR MICROGRIDS & ENERGY SYSTEMS

The EnergyPack is a key component for improving the reliability and profitability of microgrids and energy systems. It stores electricity from any distributed power source – such as gensets, wind turbines or solar panels – and delivers it when needed.

#### **Grid stabilization**

The MTU EnergyPack is able to provide grid support services and can form an autonomous grid, enabling customers to operate independently during grid outages.

#### Highest power density

Thanks to the extremely compact battery system designs and the small footprint of the housings, the MTU EnergyPack is the ideal solution for projects with logistical restrictions and limited space.

#### Digitally connected

The MTU EnergyPack is equipped with a data logger providing access to our digital solutions, including remote monitoring, fast and reliable service support and – coming soon – further features such as predictive failure prevention and operational optimization.

#### Scalable in size

Storage capacity and type of battery rating can easily be adapted, whatever your individual power and capacity requirements.

#### Ultra-fast response

By bringing power on-stream immediately, the MTU EnergyPack provides essential fast response capability for power quality, black starts, frequency response, and backup applications.

#### Seamless integration with existing power plants

The system can be built into existing conventional and renewable power plants, making it easy to optimize operation and preparing them for the future

#### Multilevel safety features

A multilevel safety concept monitors and ensures safe operation of batteries, inverters, and heating, ventilation and air conditioning (HVAC) systems. The outstanding fire and explosion protection system detects smoke and explosive gases. The safety design also includes a specially designed aeration mode and an optional built-in Novec® fire extinguishing system as well as optional pipework connections for flooding with water in case of fire.

#### Black start capability

The battery energy storage system (BESS) can be used as a black start unit due to its grid capability. The BESS can perform black starts without auxiliary voltage, and can form an autonomous grid.

#### Factory tested plug-and-play design

The MTU EnergyPack comes factory-tested onsite. The highly mobile, fully integrated plug-and-play design ensures fast, easy installation, reducing setup time and costs. Power is available more quickly, and at lower cost.

#### Flexible use

The MTU EnergyPack can accept customer setpoints or be upgraded with the MTU microgrid controller to support various applications: storage of wind and solar power in microgrids, shaving peak loads to reduce demand charges, support for electric vehicle charging, flexibilization of generation assets, frequency and voltage regulation services, and much more.

EnergyPack: The scalable all-in-one solution Power Generation

## Versatile technology

# COMPACT, FLEXIBLE, AUTONOMOUS. INSTANT POWER WHEREVER YOU NEED IT

#### Housing

The MTU EnergyPack is available in different sizes and different housings. The enclosed QS system and the containerized QM and QL systems are as tough as they come and have been custom-designed for harsh environments and challenging logistics, offering superb protection from dust, insects, humidity and heat – both inside and out. The interiors of the containerized housings are divided into sections – some with outside air contact and some without – to keep the sensitive electrics and batteries protected from any pollution.

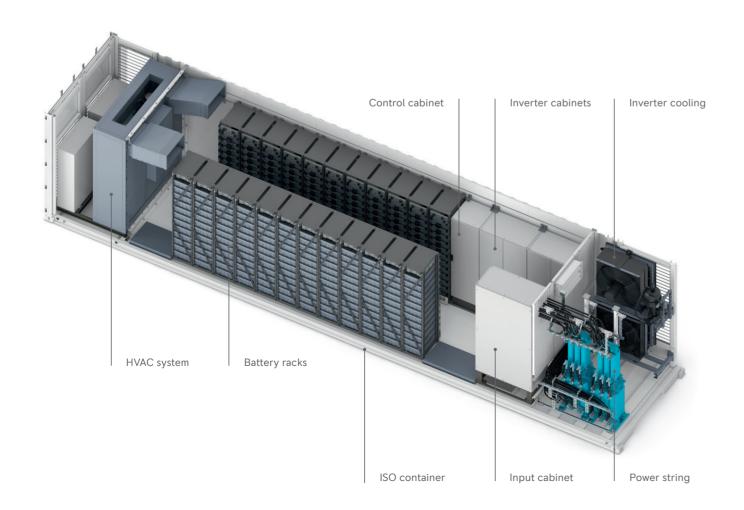

#### Batteries and battery management system

The MTU EnergyPack integrates 0.5C/1C/2C rated high-quality cells from leading manufacturers. The battery system consists of vertical racks, scalable in number to meet the required energy capacities.

Each rack contains several battery modules and one battery management system (BMS) to monitor and control the battery modules. The BMS units connect the racks to a DC power switch, allowing each rack to be disconnected from the inverter as required. All rack BMS are connected to the MTU EnergyPack's control cabinet via a master BMS.

#### Inverte

The inverter operates bidirectionally, converting AC from the grid into DC for charging the batteries, and vice versa. It supports both grid-supporting and grid-forming modes.

#### Transformer

The transformer is the interface to the upstream power grid. Its task is to transform the voltage to the level required by the inverter or grid. Dependent on the MTU EnergyPack configuration, the transformer is either installed inside or delivered as separate equipment for outdoor installation.

#### **HVAC** system

The HVAC equipment is located inside the housing and feeds temperature and humidity-controlled air to the cleanroom, protecting the sensitive electrical equipment and batteries from contact with ambient exterior conditions. The HVAC system regulates temperature and humidity to required levels to ensure the BESS equipment works to optimum effect.

#### Control system

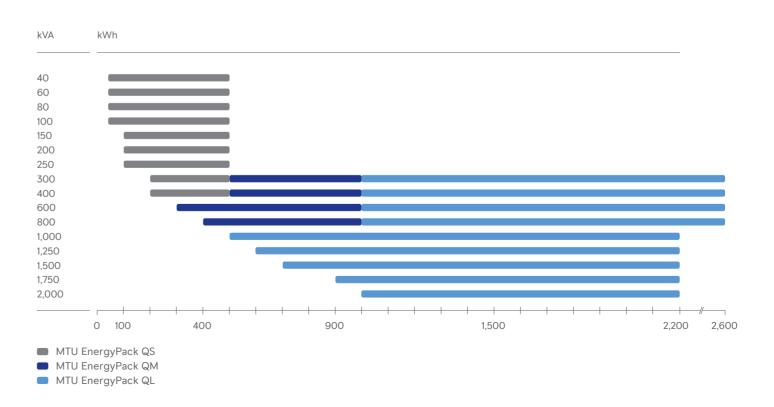

A top-level battery energy storage controller (BESC), specially designed for this application, controls all aspects of the BESS, e.g. the inverter, batteries, HVAC system, and lighting. The BESC is located inside the control cabinet, a separate compartment within the container. A built-in touchscreen and simple remote access via Modbus-IP enable full control over the MTU EnergyPack.

#### Safety features

The MTU EnergyPack features a comprehensive safety concept comprising a multilevel safety architecture, fire & gas detection, fire extinguishing options, etc.

## THE FULL POWER RANGE

The EnergyPack portfolio covers a broad power and capacity range, enabling us to offer exactly the right size of battery storage solution for your energy requirements. The EnergyPack comes in three versions: QS, QM and QL.

## EnergyPack QL

# LARGE AND POWERFUL

The EnergyPack QL is designed for customer applications with power and capacity requirements up to 2,000 kVA and 2,600 kWh. It is suitable for integrating solar assets and wind parks, and for providing frequency regulation and other ancillary services in the utilities sector.

| Key technical data MTU EnergyPack QL |     |   |
|--------------------------------------|-----|---|
| Cell chemistry                       |     | NCM                                     |
| Nominal capacity                     | kWh | up to 2,600                             |
| Nominal apparent power               | kVA | up to 2,000                             |
| Maximum apparent power (1 min)       | %   | up to 150%                              |
| Transformer                          |     | optional                                |
| Nominal voltage                      | V   | 515 V (400 V with internal transformer) |
| Enclosure                            |     | 40ft ISO HC container                   |
| Black start capability               |     | yes                                     |

## EnergyPack QM

# MEDIUM AND VERSATILE

The EnergyPack QM is designed for customer applications with power and capacity requirements of up to 800 kVA and 1,000 kWh. It is suitable for off-grid solutions, for reducing fuel dependence in remote communities, or for reducing demand charges in the industrial sector.

| Key technical data MTU EnergyPack QM |     |   |
|--------------------------------------|-----|---|
| Cell chemistry                       |     | NCM                                     |
| Nominal capacity                     | kWh | up to 1,000                             |
| Nominal apparent power               | kVA | up to 800                               |
| Maximum apparent power (1 min)       | %   | up to 150%                              |
| Transformer                          |     | optional                                |
| Nominal voltage                      | V   | 515 V (400 V with internal transformer) |
| Enclosure                            |     | 20ft ISO HC container                   |
| Black start capability               |     | yes                                     |

## EnergyPack QS

## SMALL AND STURDY

The EnergyPack QS is designed for customer applications with power and capacity requirements of up to 400 kVA and 550 kWh. It is suitable for off-grid solutions, for reducing fuel dependence in small remote communities, and for enabling self-consumption of solar power in the commercial and public sectors.

| Key technical data MTU EnergyPack QS |     |                 |
|--------------------------------------|-----|-----------------|
| Cell chemistry                       |     | NCM             |
| Nominal capacity                     | kWh | up to 550       |
| Nominal apparent power               | kVA | up to 400       |
| Maximum apparent power (1 min)       | %   | up to 150%      |
| Transformer                          |     | internal        |
| Nominal voltage                      | V   | 400 V           |
| Enclosure                            |     | compact housing |
| Black start capability               |     | yes             |

#### Service Solutions

# ENSURING LONG, RELIABLE SERVICE LIVES

EnergyPacks are built to deliver the highest performance with low life-cycle costs. Our maintenance services keep them performing that way with a full portfolio of service solutions.

Remote operation control and diagnostics, digital connectivity solutions and optimised maintenance keep the life-cycle costs of the MTU EnergyPack to a minimum. With high availability of spare parts, we ensure your systems stay up and running, wherever in the world they happen to be, and operators can have the benefit of peace-of-mind provided by performance guarantee agreements that can be tailored to fit your specific requirements.

#### Reporting & optimization

add transparency to system performance and allow constant improvement of system parameters based on operational experience

#### Preventive & corrective maintenance

performed by trained technicians to ensure a high quality of work

#### Active monitoring

by trained personnel to identify failures in time and initiate required actions to reduce down-time

#### Remote diagnostics

by experts to identify root causes of malfunctions (3<sup>rd</sup> level support) and perform low-level configuration changes and bug-fixes

#### Repair guidance

for local personnel from experts via phone, video conference or e-mail/mail to minimize down-time and costs

#### ValueCare Agreements

make it easy to optimize lifecycle costs, maximize uptime and devote more time and resources to your core business, with tailored solutions to move your business forward

#### Extended warranty cover

for MTU products, protecting against unexpected costs with a scope tailored to customer needs

#### Local support. Worldwide. 24/7

We ensure you get tailored support from our global network of over 1,200 service centers – anytime, anywhere. Whether it's connecting you with a local service partner or assigning an urgent problem to a dedicated team of our experts, we're ready to assist – wherever you are, whatever you need.
